Att'y Dkt. No.: US-103

IN THE ABSTRACT:

Kindly amend the abstract as follows, in accordance with 37 C.F.R. § 1.121:

Att'y Dkt. No.: US-103

U.S. App. No: 10/716,470

A DNA encoding a variant of a protein, the protein having a loop region and six hydrophobic helixes-helices and involved in secretion of L-lysine to the outside of a cell, wherein the DNA encodes a variant of a protein not containing the loop region and facilitates secretion of L-lysine, L-arginine or both of these L-amino acids to the outside of a cell-of a methanol-assimilating bacterium when the DNA is introduced into the bacterium, specifically *lysE*24, is introduced into a *Methylobacillus* bacteria to improve L-amino acid productivity, especially L-lysine and L-arginine productivities.
